

Clothes Line Need: 35mm film container, two metal clips and 11 ½ feet of nylon cord

Punch holes through the container and the lid. Pass the cord through the holes and attach clips.

Stuff the cord into the container and replace the top for a self-storing system.

When you want to use it just unroll the cord; wrap each end around a tree and attach the clip to the cord.

Simple Backpack Hanger

Tired of having your packs fall over while packing or unpacking gear at camp, or from having them get wet and muddy by sitting on the ground after it rained. All you need for this is a decent length of nylon strap (a wider strap is probably better than a narrow one), a buckle and a carabiner.

In camp you simply wrap the strap around a sturdy tree, run the loose end back through the buckle and pull it tight. Then lift your backpack by the top carry loop and slip it into the carabiner. It now becomes much easier to root through your pack using two hands than having to worry about trying to hold it up. And, you get the added benefit of keeping it clean and dry.
